Raspberry PI – Emitator FM

In acest tutorial vei descoperi cum se poate transforma placa Raspberry PI intr-un emitator FM. Poti asculta melodiile preferate pe o distanta relativ scurta in jurul placii (cativa zeci de metri) iar pentru a realiza acest lucru este nevoie de o antena.

Antena va fi un fir lung de 20 cm care se conecteaza la pinul GPIO4 sau pinul 7, din imaginea de mai jos.

| 3.3V | 1 | 2 | 5V |
|-----------|----|----|------------|
| I2CO SDA | 3 | 4 | DNC |
| I2CO SCL | 5 | 6 | GROUND |
| GPIO4 | 7 | 8 | UART TXD |
| DNC | 9 | 10 | UART RXD |
| GPIO 17 | 11 | 12 | GPIO 18 |
| GPIO 21 | 13 | 14 | DNC |
| GPIO 22 | 15 | 16 | GPIO 23 |
| DNC | 17 | 18 | GPIO 24 |
| SP10 MOSI | 19 | 20 | DNC |
| SP10 MISO | 21 | 22 | GPIO 25 |
| SP10 SCLK | 23 | 24 | SP10 CE0 N |
| DNC | 25 | 26 | SP10 CE1 N |

Asa arata antena conectata la placa Raspberry PI:

Dupa ce ai conectat antena urmeaza sa conectezi alimentatorul de 5V si cablul de retea. Logheaza-te la placa prin SSH si executa urmatoarele comenzi:

1. Creeaza fisierul pifm:

mkdir pifm

2. Schimba locatia:

cd pifm

3. Descarca arhiva care contine codul sursa si fisierul executabil:

sudo wget http://www.icrobotics.co.uk/wiki/images/c/c3/Pifm.tar.gz

4. Dezarhiveaza fisierul:

sudo tar -xzvf Pifm.tar.gz

5. Executa programul specificand melodia (sound.wav) si frecventa (100.0 Mhz)

sudo ./pifm sound.wav 100.0

```

```

Din acest moment, placa Raspberry PI a inceput sa transmita pe frecventa 100.0 Mhz melodia sound.wav.

Porneste aparatul de radio (sau telefonul mobil daca are aceasta functie) si schimba frecventa acestuia la 100 Mhz.
